Upcoming Headers

Cross-Origin-Embedder-Policy [Cross-Origin Embedder Policy](#) allows a site to prevent assets being loaded that do not grant permission to load them via CORS or CORP.

Cross-Origin-Opener-Policy [Cross-Origin Opener Policy](#) allows a site to opt-in to Cross-Origin Isolation in the browser.

Cross-Origin-Resource-Policy [Cross-Origin Resource Policy](#) allows a resource owner to specify who can load the resource.

x-frame-options	X-Frame-Options tells the browser whether you want to allow your site to be framed or not. By preventing a browser from framing your site you can defend against attacks like clickjacking.
x-content-type-options	X-Content-Type-Options stops a browser from trying to MIME-sniff the content type and forces it to stick with the declared content-type. The only valid value for this header is "X-Content-Type-Options: nosniff".
referrer-policy	Referrer Policy is a new header that allows a site to control how much information the browser includes with navigations away from a document and should be set by all sites.
content-security-policy	Content Security Policy is an effective measure to protect your site from XSS attacks. By whitelisting sources of approved content, you can prevent the browser from loading malicious assets. Analyse this policy in more detail. You can sign up for a free account on Report URI to collect reports about problems on your site.
set-cookie	There is no Cookie Prefix on this cookie.
strict-transport-security	HTTP Strict Transport Security is an excellent feature to support on your site and strengthens your implementation of TLS by getting the User Agent to enforce the use of HTTPS.
permissions-policy	Permissions Policy is a new header that allows a site to control which features and APIs can be used in the browser.
